

The Portable Wash Pad That Doesn't

Hydropads don't require permitting to install, because they are portable.

Hydropads don't require engineers, architects or plans to be drawn-up and approved by local government agencies to implement them.

Hydropads don't become permanent they can be moved anywhere, anytime in just hours to your new site.

Hydropads don't require concrete under them for support or **poured into them.**

Hydropads don't require excavation, underground piping or in-ground sumps, everything is above ground.

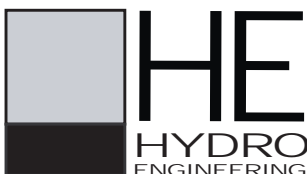

Hydropads don't break, with weight capacities up to 15,000 lbs per square foot and will hold 30-tons per axle. Even more with tracked type equipment.

Hydropads don't plug up with dirt, because they don't hold water. Solids removal is simple, water and solids flow to the side gutter for settling and quick clean-out, even during times when you are washing.

Hydropads don't require exact sizing they connect together in 8' sections that come 8, 10, 12 & 14' wide. Your wash pad can be expanded at any time providing any size wash pad required by even the largest and heaviest equipment.

Hydropads don't have an equal, the Hydropad's unique design is unlike any other portable wash pad design in existence. It's patent pending.
