Dirt and Mud Settles Out And Is Removed By A Skid Steer!

Hydro Engineering has designed this solids collection system to complement the Hydropad Above Ground Wash Rack System. Many of our pad systems are used for high solids cleaning where removing dirt and mud is the primary goal. This unique solution makes collection and removal of these solids quick and easy.

Water and solids drain from the Hydropad's side gutter. They are flushed down the length of the gutter system and into the Drive In Clean Out Tray, where they settle out. The dirt, mud and gravel are quickly removed using a skid steer.

This unique design allows any Hydropad to be retrofitted with the Drive In Clean Out Tray.
