

Hydromat, Wash Water Containment Mat Model 2ZN154

Hydromat is a quickly deployable wash water capture and containment mat for washing and decontamination applications.

Constructed using the best available heavy weight (35 ounce) fabric and vinyl coating. This combination makes Hydromat extremely tough and resistant to tearing and abrasion. Air berms include a 12 volt rechargeable pump to inflate and deflate berms. A surface level fluid skimming pump is placed in a low spot that serves as the fluid collection point.

Optional track mats can be lined up with tire tracks of vehicles that will drive over Hydromat. When placed over and under Hydromat, abrasion resistance of Hydromat containment system is substantially improved.

Options

- Determine the size required
- Air or foam berms
- Hydromat shield strips to provide abrasion resistance for wheel or tracked vehicles
