

Hydrokleen Wastewater Filtration

500 Gallon Capacity RST - Recycled Water Storage Tank

The RST can be an essential option to a Hydrokleen water filtration and recycling system when an available sewer discharge is not available. Hydrokleen water filtration and recycling systems have a function for automatic discharge to drain. This auto discharge occurs when the system has overflowed with water. If there is no available source for discharge of water, the RST becomes that discharge location. The collected water in the RST then becomes the first source for make up water back to the Hydrokleen system. Contact a Hydro Engineering, Inc. project manager for complete system design and application assistance.

Standard Features

- Gravity Flow Through Design
- Self-cleaning Tank
- Overflow Protection with Manual Drain Valve

Optional Features

- Rotating Beacon for Overfill Warning
- Auto Drain Valve
- PLC Controls
- Auto Pump-out to Auxillary System

Specifications

Dimensions, Inches (cm)	59.625" (151.4) L X 52" (132.1) W X 96" (243.8) H
Weight, Lbs (kg)	696 (315.7)
