Houston, TX 77036

The Hydropad we purchased in 2016 is perfect for our golf course maintenance facility. Westwood GC is located next to one of Houston's many bayous, and our regulations on waste water are strict. Our Hydropad allows us to recycle water and prevent any waste water from leaving the property.

The system was simple to set-up and designed to be very user friendly. The level of solids that we produce on the golf course (sand, mud, grass clippings, etc.) is no match for the Hydropad wash rack with flip screens that separate the solids and wash water. The flip screen filters are easy to clean and have become part of our maintenance routine.

We do not have a large maintenance facility, and we must utilize our space efficiently. The Hydropad fits our facility perfectly. There are many different options for set up with the Hydropad. We were not able to have our filters, tanks, and pump right next to the wash pad, therefore, we were able to set them up out of the way and the Hydropad still works perfectly. Our Hydropad allows us to drive onto the pad on one side, and off on the opposite side. This makes our cleanup routine very easy.
