

Our facility had a unique problem needing to wash a large piece of equipment, indoors, in a location that did not have drains and needed to be removable as our needs changed.

Dave Wallace with Hydro blaster helped come up with a 20 by 16 platform that could support 12 tons, could be located anywhere in our facility, with a built-in drain containment allowing us to pump drain water to a proper location and this containment can be relocated in a short time as our needs change.

- The platform was shipped to our facility on time, with no damage
- Assembled in an afternoon, the fit and finish was as promised
- We have used this product on a manufacturing line for 3 years and is performing as it should

I would recommend HYDRO for unique wash bay needs.
